

## Omega Proteins Ltd Environmental Policy

Omega Proteins Ltd specialises in the processing of animal by-products. Category 3 sites process material from abattoirs, meat processing plants and retail premises to produce meals, oils and pet food ingredients. Category 1 sites process material unfit for human consumption, producing meal for fuel use and tallow for biodiesel manufacture. The company is committed to minimising the impact of its operations on the environment and local community and to preventing pollution.

This Environmental Policy will be implemented and maintained as part of the company's Environmental management Systems. It will be communicated to all employees working for the company and Stakeholders.

It is our policy to:

- Operate each activity in compliance with applicable legislation, industry codes of practice and environmental permits
- Periodically review and where possible improve the Environmental Management Systems of the business
- Identify the environmental aspects associated with our activities and establish a mechanism to monitor and control the identified impacts on the environment
- Promote environmental awareness in company training programmes to ensure that staff are aware of the environmental risks associated with company operations and their roles in ensuring that these risks are minimised
- Minimise waste, promote recycling and reduce the consumption of resources and energy in our operations
- Set and periodically review objectives with measurable targets for improving environmental performance
- Demonstrate a programme of continuous improvement throughout the business
